

Installing Linux Using a VirtualBox Image

Abbreviated Instructions

- Install VirtualBox
- Download a Linux VDI (Virtual disk Image)
- Extract the VDI
- Create a new Virtual Machine
- Use the VDI for the hard drive

Step by Step Instructions

- Download and Install VirtualBox
 - <http://www.virtualbox.org>
- Download and install a program that will extract the contents of 7zip archives.
 - Windows
 - <http://www.7-zip.org/>
 - Mac
 - From the [Mac App Store](#)
 - From their website: <http://unarchiver.c3.cx/unarchiver>
- Download the VDI (Virtual Disk Image)
 - CentOS
 - [CentOS Download Page](#)
 - Username: adminuser
 - Password: adminuser
 - Root password: adminuser
- Extract the 7zip archive file contents
 - Windows
 - Right click on the file, go the 7zip menu, and click on "Extract here."
 - Mac
 - Double click on the file to extract the contents.
- Optional - Move the VDI to the directory where VirtualBox Disk Images are stored.
 - You can find the default location by looking at VirtualBox's Preferences. For Windows, go to the File menu and click on Preferences. For Mac, go to the VirtualBox menu at the right and click on Preferences.

- Windows default VDI folder:
 - C:\Users\your-username\Virtualbox VMs
 - Mac default VDI folder:
 - /Users/your-username/Virtualbox VMs
- Create a New Virtual Machine in VirtualBox using the uncompressed VDI file as the Hard Drive
 - Run VirtualBox
 - Click the "New" button
 - Enter the name "centos"
 - The OS Type should automatically be selected. If it is not, use "RedHat" for CentOS, as CentOS is a RedHat derivative.
 - Click on "Continue"
 - On the "Memory size" screen, click "Continue"
 - On the Hard Drive screen select the radio button labeled "Existing"
 - Click on the folder icon
 - Navigate to the VDI. Select the "CentOS-7.2-1511-x86_64-gnome.vdi" file that was extracted in the previous steps and click "Open."
 - Back at the Hard Drive screen click "Create"
- Start the Virtual Machine
 - Click on the Green Arrow

Welcome to Linux!

7zip

Windows users, extract the contents of the archive with the 7-zip tool from <http://www.7-zip.org/>.

Mac users, extract the contents of the archive with The Unarchiver from the [Mac App Store](#) or from their website: <http://unarchiver.c3.cx/unarchiver>

UnRAR
